Statement on the Provision of Data and Computer Code for Published Papers

Reproducibility and availability of data and code

In the interests of transparency and reproducibility, it is the policy of the *Journal of the Royal Statistical Society* that published papers should, where possible, be accompanied by the data and computer code used in the analysis. Both data and code must be clearly and precisely documented, in enough detail that it is possible to replicate all results in the final version of the paper.

In situations where authors are unable to release their data or code, for example because of data access agreements or use of proprietary materials, they must justify this clearly at the time of submission. Where possible, full details must be provided of how access to the materials can be obtained. It is the authors' responsibility to ensure that they have permission to distribute such details.

If authors are not able to provide either the data/code or any details of how these may be obtained, the reasons for this should be explained clearly at the time of submission.

The Editors reserve the right to refuse publication of any paper for which the justification for failing to provide (details of how to access) data or code is deemed inadequate.

Compulsory on-line manuscript submission form declaration

Access to data and computer code

It is the policy of the *Journal of the Royal Statistical Society* that published papers should, where possible, be accompanied by the data and computer code used in the analysis. Both data and code must be clearly and precisely documented, in enough detail that it is possible to replicate all results in the final version of the paper.

Confirm that, if the paper is accepted for publication, you can make data and code available, to accompany the published paper:

Yes

No

If no, please state why and, if possible, give full details of how access to the materials can be obtained:
